TITLE : ANTIBACTERIAL ADHESIVE TAPE

ABSTRACT : PROBLEM TO BE SOLVED: To obtain the subject sheet capable of easily protecting proliferation of bacteria by solely covering surfaces of kitchen instruments by using a non-drawn resin film containing an inorganic antibacterial agent and laying an adhesive layer on the back face.

SOLUTION: This antibacterial adhesive sheet is prepared by allowing a non-drawn resin film (preferably a polyester elastomer film) to contain an inorganic antibacterial agent (preferably a material supporting an antibacterial metal or metal compound) and laying a layer of an adhesive (preferably an acrylic resin-based adhesive). The non-drawn resin film can be a laminated film having two or more layers. In the inorganic antibacterial agent, when supporting the antibacterial metal or metal compound to a support, the supported amount is preferably 0.5-30 wt. The inorganic antimicrobial agent is preferably powdery one having 0.5-10 μm average size. The sheet can adhere to recesses, corners and curves of kitchen instruments and effectively prevent proliferation of bacteria.
